

## DEVICE SAVES TOIL OF 50 ENGRAVERS

Uncle Sam to Economize By  
Installation of a Wet-  
ting Machine.

There has just been perfected at the Bureau of Engraving and Printing a wetting machine by which the labor of twenty men and thirty women will be rendered unnecessary.

It will perform automatically the work of fifty persons, besides having added advantages. It is expected to render all paper money "germ proof," and will thus bring about an era of clean money. Other places will be found for the employees displaced.

Before the linen paper on which money, notes, bonds, stamps and the various securities of the United States Government are printed, it must be wet to render the paper plastic and soft, so it will sink into the lines of the engraved plates, and draw out all the ink, thus making a perfect impression of the minute designs used to prevent counterfeiting. Hard, dry paper will not do this.

Two Sides to Be Wet.

As the notes are printed one side at a time, each must go through the wetting process. For this double wetting, the services of 144 men and girls are required.

Under the present method, large numbers of sheets are placed between wet cloths, and left over night. The next day the pile is rearranged, so that what has been the middle will be on the top or bottom. This is to more thoroughly moisten the sheets which have not been in contact with the damp cloths. This method is fast from satisfactory, and great trouble is experienced in the unequal shrinkage of the paper in drying. By the new method, the result of two years of experimenting by the mechanicians and inventors at the bureau, each sheet is wet to exactly the same degree.

Wetting Exactly Regulated.

The amount of moisture can also be exactly regulated. The most important feature of the machine is its automatic feeding device. By this means only one girl is required for each 500 sheets of each two machines, and another girl required to remove the finished product from each two machines. In this way, where three men and two girls are now required for each 500 sheets, the new machine will produce 5,000 wetter sheets in the same time. These figures are believed to be conservative.

Into the water with which the paper is wet will be put a small quantity of formaldehyde. This will react upon the gelatinous sizing of the paper, which now furnishes the food for the germ lodged upon the money. The germ food supply will be cut off, and bacteria communicated to a bill will soon die.

Attack on Cabinet Officers  
Vindicated Amid Stormy  
Scenes In Court.

Boo and jeers met each decision of the magistrate, Sir Alfred de Reutzen, and each woman declared she would accept the alternative of imprisonment rather than pay the fine.

Ten were fined \$5 or a month's imprisonment while a penalty of \$10 or a fortnight's imprisonment was imposed on the other five. They were charged with breaking the windows of cabinet ministers' houses, and all pleaded guilty when arraigned.

## Our Refrigerator Express Cars Deliver the Butter Fresh

THE advantage of comprehensive organization and absolute commercial responsibility is evidenced in no case more fully than in that of the Fox River Butter Company, producers of Clover Hill Butter.

Starting 25 years ago with two small creameries in the Fox River Valley, Illinois, and producing from that day to this the highest known quality of creamery butter, the Fox River Butter Company has grown, until today it operates 400 creameries in the Fox River Valley and in Wisconsin and Minnesota, the great dairy countries of the Middle West; operates 50 sales branches in 50 leading cities of the East and Middle West; operates its own private express, fast refrigerator car service; and operates its own wagon delivery system in each of its branch cities.

Let us show now exactly what such organization means to you.

Four days ago we received at our country creameries, out in that wonderful Western dairying section, 1,000,000 pounds of fresh, whole milk—milk that we knew was pure and clean, inspected by our own trained inspectors and O. K.'d by them as Clover Hill milk; then pasteurized, these million pounds of milk went into our separators, and from the separators the pure, rich, clean cream went into our clean, shiny churns. In these churns it became Clover Hill Butter.

When it came from the churn—the best butter produced—it was molded into full pound prints, 16 ounces of solid butter, and packed, each pound in the famous Clover Hill odor-proof parchment and sealed carton.

That night the butter made that day was shipped in our own refrigerator express cars to our branch houses. One car of that butter came to our branch house here. It arrived yesterday. And from that car our own delivery service distributed it among your reliable grocers who sell Clover Hill Butter.

Today, at your own grocery store you can buy this sweet, fresh Clover Hill, just as pure and clean and tasty as the moment it left the churns in our sunny, airy creamery.

## ONE BREAD CRUST FOR A WHOLE DAY

Prisoner Who Escaped From  
Workhouse Charges In-  
human Treatment.

Asserting that he ran away to escape the alleged cruelty of guards and keepers, Dudley Moore, who left the new District workhouse at Occoquan, Va., August 24, and was arrested yesterday in Baltimore, where he had obtained a position as driver on one of the city ambulances, stood in a cell at the First precinct station this morning, and told a story of inhuman treatment at the District "farm" down the Potomac.

"I had to get away," said Moore, "because I couldn't stand it any longer. Anybody could have escaped down there at the time I did if he had the nerve. We were all sleeping in tents, and it was an easy matter to run away from the guards. There are three roads in that section, the railroad, the postroad, and the telegraph road. The rest is woods.

Had in the Woods.

"If you keep off the three roads and stay in the woods there is no way in the world for them to find you.

"The worst thing about the whole place is the way they punish prisoners," continued Moore. "They shake a man to a post, dump six or seven wheelbarrows of stone by him, and make him break it before going to bed. This punishment is kept up for nine or ten days, and all the food the prisoner gets is one crust of bread a day."

Dudley was serving a short sentence for larceny, and in company with another prisoner ran away on the afternoon of August 24.

Fired on by Guard.

The guard fired several shots at the fleeing prisoners, and chased them some distance in the woods, where they were lost to view.

"When a man has been at a place like that for two or three days," added Moore, "and gets the whisky out of his system he can't stand inhuman treatment. He can't be worked hard all day long, but the guards down there don't seem to have any feeling for the prisoners."

PURIFYING THE BLOOD  
THE ONLY PERMANENT CURE

No case of Rheumatism was ever cured except by a thorough purification of the blood; just as long as the blood remains charged with fermenting uric acid poison, the painful disease will continue. The pains and aches of Rheumatism are simply superficial effects of the impurities in the circulation, and sometimes may be temporarily relieved by the application of plasters, liniments, hot cloths, etc. But the person who trifles with this dangerous disease by depending on local treatment alone, is certain to pay for the mistake with constant suffering later on. S. S. S. cures Rheumatism in the only way it is possible to cure the disease. It goes down into the blood, and removes the uric acid from the circulation, so that the nerves, bones, muscles and joints are lubricated and fed with nourishing elements instead of being continually irritated and inflamed with the sharp, uratic impurity. Then when S. S. S. has cleansed and purified the blood, the pains and aches cease, all inflammation disappears, stiffened muscles are made pliant, and every troublesome symptom of Rheumatism is permanently corrected.
